

ATOMIC BALTIC

Atomic Threats In The Baltic Sea Region

The Baltic Sea is one of the most radioactively polluted seas in the world. Chernobyl accident, nuclear weapon tests and reprocessing plants were the biggest polluters in the past, while these days a number of "civil" atomic facilities are releasing big amounts of radionuclides contaminating the sea.

The lecture is supposed to raise awareness on the threats posed by nuclear power around the Baltic Sea. Also information on anti-nuclear movements in the Baltic Sea region will be provided.

**information event:
January 15, 2015 @ 6 PM**

*Luonto-Liitto
Helsinki, Annankatu 26 A,
5th floor*
