

Nuclear Climate Camp Lapland 20-26 July 2009

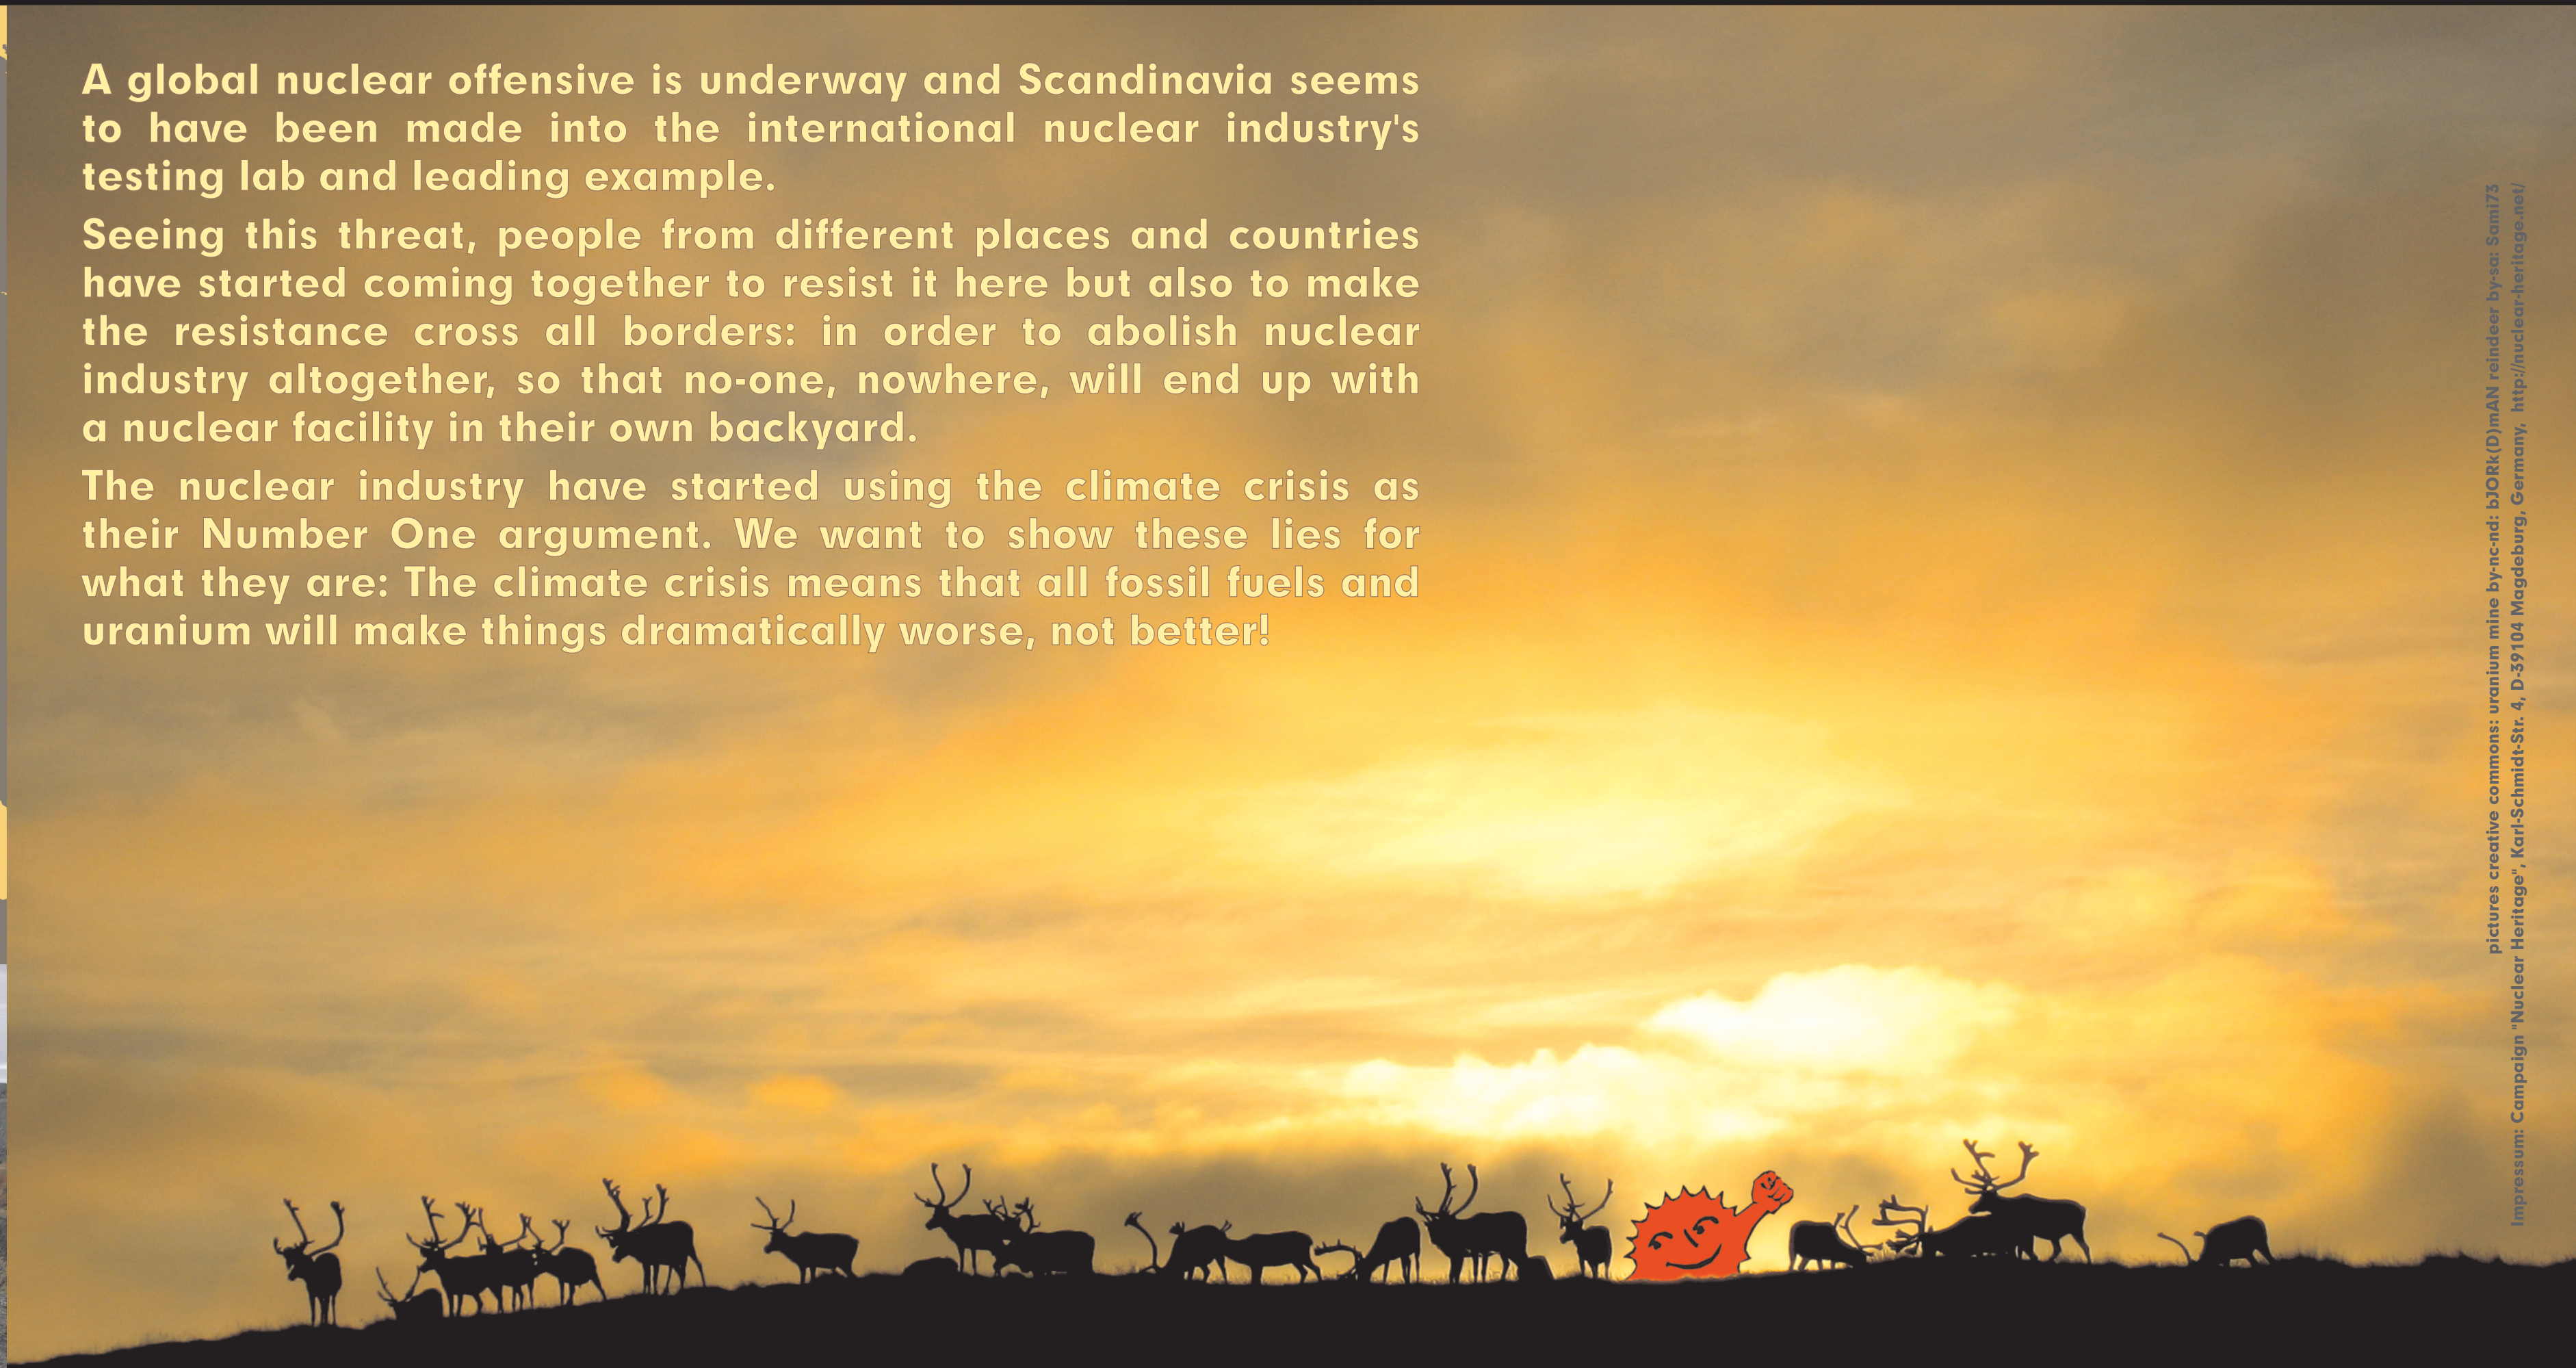

A global nuclear offensive is underway and Scandinavia seems to have been made into the international nuclear industry's testing lab and leading example.

Seeing this threat, people from different places and countries have started coming together to resist it here but also to make the resistance cross all borders: in order to abolish nuclear industry altogether, so that no-one, nowhere, will end up with a nuclear facility in their own backyard.

The nuclear industry have started using the climate crisis as their Number One argument. We want to show these lies for what they are: The climate crisis means that all fossil fuels and uranium will make things dramatically worse, not better!
